# AMBULANCES

GHODU Life Support Ambulances are designed to provide optimum care and lifesaving medical equipment for patient transfer. Built on a versatile van base they can be customized to fit individual requirements.

## OVERVIEW

GHODU is a leading ambulance manufacturer in India, delivering finest solutions in customized Ambulances. GHODU has paved the way for industry novelties, manufacturing the safest and most advanced care ambulances and emergency vehicles on the road. Our Life Plus+ range of ambulances and mobile hospital come retrofitted with all the medical amenities to ensure critical medical support at the time of an emergency. With high customization component and state-of-the-art gadgets, we build innovative ambulances that deliver on customer expectations and assist paramedics in saving lives.

### THE BASIC LIFE SUPPORT (BLS) AMBULANCE

BLS ambulances are typically emergency ambulances & aid the required medical support during the transit until the patient is transported to the hospital. It comes well equipped with the newest medical equipment like an automatic external defibrillator, vital sign monitoring equipment, Pulse Oxi-metre & Oxygen delivery services combined with competent nurses to help patients who aren't physically and emotionally stable. The BLS ambulances are designed to supply medical aid to the patients who are in suffering from:

- Are suffering from orthopedic injuries such as fractures
- Have got seriously injured in accidents
- Need complex care or rehabilitation

### ADVANCE CARDIAC LIFE SUPPORT (ACLS)

Advanced Cardiac Life Support Ambulances (ACLS) are the improved version of normal ambulances. The patients who require care, like adequate blood circulation and ventilation, at the time of shifting are offered these extensive services by the ACLS ambulance.

- Patients who are affected by any Cardiac arrest or strokes.
- Patients who require constant IV medicine support.
- Patients who face any difficulties during shifting to hospitals.
- Obstetrical patients who are preparing for deliveries
- Patients who need critical care transport

### Negative Pressure Ambulance is a Fully Equipped Life Support Ambulance with A Negative Pressure Air System

#### Advantages

- Designed for the transport of patients with **airborne contagious** diseases.
- It is fitted with a **HEPA filter that traps minuscule contagions** and prevents them from escaping to the environment.
- The inside **air pressure is kept 12Pa lower** than the surrounding environment, thereby preventing the natural flow of air from inside to outside.

- The air circulation system replenishes the air twelve times within an hour.
- It is fitted with UV light emitting LED rods that disinfect the air by breaking down a virus' outer protein cover and rendering it inactive.
